

KAVERI PORTAL

A blockchain-based land records management system is devised to record land-based information to make the process smooth and hassle-free for Karnataka Govt. The idea was designed, implemented and started by the IIT Kanpur C3i National Blockchain Project, *Kaveri*. This blockchain system provides a single source of truth and a complete picture of the land in one place. It makes checking land transaction history easier and can avoid land disputes to a great extent.

BLOCKCHAIN BASED LAND RECORDS

- **Kaveri** is blockchain-based land records in Karnataka
- Operational since six months
- Functional in six districts

Each property holder will be given a property card akin to an ATM card, which can be accessed through a PIN. The property transaction details can be accessed only with the authentication of the user's digital key or PIN number. From a user's point of view, this system protects property data besides removing the hassle of storing hard copies of documents. A user will be able to swipe the card at citizen service centres such as Bangalore One and download or print the same.
